Inspector

## FD Prevention/Inspection

### Easy to Learn and Easy to Use

This specialized system provides a fire department's fire marshal the tools to organize their pre-plan information and fire prevention inspections.

Inspections can be standardized by using Inspections Sheets, which are created based on the occupancy of the location being inspected. The system provides a fire marshal with the ability to:

#### CREATE INSPECTION SHEET

Based on the occupancy type, a blank inspection sheet is created.

The inspection sheet includes:

- Current building owner with contact information
  - Current occupant with contact information
  - Utility locations
  - Building size
  - On-site hazards
  - Hydrant locations
  - Fire code inspection items (exits clear, fire extinguishers inspected, etc.)
- Inspection items are based on a master list created by the department's Fire Marshal for each occupancy type.

**CREATE INSPECTION RECORD** - Document any deficiencies that do not meet Fire Code. Enter description of deficiency and cite Fire Code chapter and text from Fire Code chapter

**CREATE VIOLATION LETTER** - Using information in Preplan and deficiencies listed in Inspection Record, a letter of violation is created that can be mailed to the building owner.

**TRACK INSPECTION HISTORY** - Track Inspection violations, complaints, modifications to Preplan Information

#### EXPORT DATA

Export data to FD Fire Marshal's office:

- Inspection Data
- Preplan Information
- Current building owner with contact information
- Current occupant with contact information
- Utility locations
- Building size
- On-site hazards
- Hydrant locations

#### WIRELESS APPLICATION

Use FD Fire Prevention/Inspection from laptop using wireless network connection

*EXPORT CONTROLS: Products purchased or received under a Sale are subject to export control laws, restrictions, regulations, and orders of the United States.*
